

There is not much by means of usable software at this point. We each have been working on our portion of the software and unfortunately have not had the time to stitch it all together yet. We miscalculated what our initial velocity should be and how difficult the chosen stories are. We will take this into account on our next iteration. For now, we have 3 different branches on GitHub with the code that each of us have been working on contained. Next iteration will be mostly focused on integrating these disconnected functionalities.
